DETAILED ACTION

Election/Restrictions

1. Applicant's election of Invention II drawn to claims 13-20 in the reply filed on 01/09/2006 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 1-12 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 01/09/2006.
3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Information Disclosure Statement

4. The information disclosure statement(s) (IDS) submitted on 10/16/2003 and 02/09/2005 is/are acknowledged. The submission is in compliance with the provisions of 37 CFR 1.97 and 1.98. Accordingly, the examiner is considering the information disclosure statement(s).

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3736

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 13-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Schulman et al (5750926). For claim 13, Schulman et al discloses an hermetically sealed implantable sensor comprising: an insulating substrate 20 defining an electrical feedthrough region (column 6 lines 16-21), a sensor 50 (column 6 lines 21-24) in contact with said substrate, an electrical conductor 32 disposed within said feedthrough region, a bond wire 35 connecting said conductor to said sensor and disposed within an insulator (column 5 lines 20-27), a lead 96 connected to said conductor and configured for connection to an implantable medical device (column 6 lines 21-24), and wherein the sensor and substrate are encapsulated in a thin film of hermetic material (column 3 line 60 – column 4 line 2).
7. For claim 14, Schulman et al discloses encapsulating the sensor and substrate in a layer of insulating material (column 3 line 60 – column 4 line 2).
8. For claim 15, Schulman et al discloses a substrate composed of glass (column 3 lines 54-60).
9. For claim 16, Schulman et al discloses a temperature sensor (column 6 lines 21-24).
10. For claim 17, Schulman et al discloses a hermetically sealing material comprised of platinum (column 1 lines 35-47).

Art Unit: 3736

11. For claims 18 and 19, Schulman et al discloses an insulating hermetic thin film thickness of 0.25 mil (column 6 lines 38-39) which equals 0.00635 mm and is thus within the ranges of 10 nm to 0.1 mm and 5.0 nm to 0.5 mm.

12. For claim 20, Schulman et al discloses a conductive pad 36 of material connecting said lead and said electrical conductor.
